

Lake Sherwood Community Services District (District) was created on March 28, 1989, and serves approximately 1,919 customers with approximately 674 service connections. The District lies within southeastern Ventura County on the north side of the Santa Monica Mountains and is bounded by Westlake Village, Thousand Oaks, and Newbury Park.

The Water and Sanitation Department is responsible for the operation and maintenance of the water system. The Ventura County Board of Supervisors is the governing body.

The District's distribution system consists of 18 miles of water lines, two pumping stations, and two reservoirs that store 5 million gallons of water. In the year 2010, the District supplied approximately 1,148 acre-feet of water for domestic, landscape irrigation, and fire protection needs.

District water is imported from the State Water Project through the Metropolitan Water District (MWD) and Calleguas Municipal Water District (CMWD). Water from the State Water Project originates in northern California. This water is captured in reservoirs north of Sacramento and released through the natural rivers and streams into the Sacramento-San Joaquin Delta. The 444-mile long California Aqueduct then carries water from south of the delta to State Water Project contractors, including MWD. MWD treats the water at Jensen Treatment Plant located in Granada Hills. CMWD purchases water from MWD and purveys it to 26 water suppliers within Ventura County, including the District.
