

TODD ROAD JAIL WASTEWATER TREATMENT PLANT SEWER TREATMENT SERVICE

Construction of the County's Todd Road Jail was completed in March 1995. Water and Sanitation Department operates and maintains the jail's wastewater treatment plant. Effluent generated from the inmates, commercial kitchen, and laundry is treated and disposed of at the site. Wastewater is transported by a gravity sewer to a wet well with submersible grinder pumps. The wastewater from the wet well is lifted to a drum screen then pumped to an extended aeration system and two clarifiers. Disposal is by percolation and evaporation.
